

TeQani

Omar AlAmoudi, Mohanad Hatem, Khalid AlZahrani
Supervised by : Prof. Mohammed AlHaddad
Department: Information Technology

Abstract

TeQani is an Mobile Application which aims to help the users to fix their technical problems, For example : phone screen replacement, Network issues. TeQani will provide a platform for users to post about their technical problem and freelancers will reply with an offers to fix the problems, Then the user will choose an offer based on the freelancer rating and price. TeQani also will round up freelancers in one place, And also it will help the students and the technicians that have an experience in technical fields to add a new source of income.

Introduction

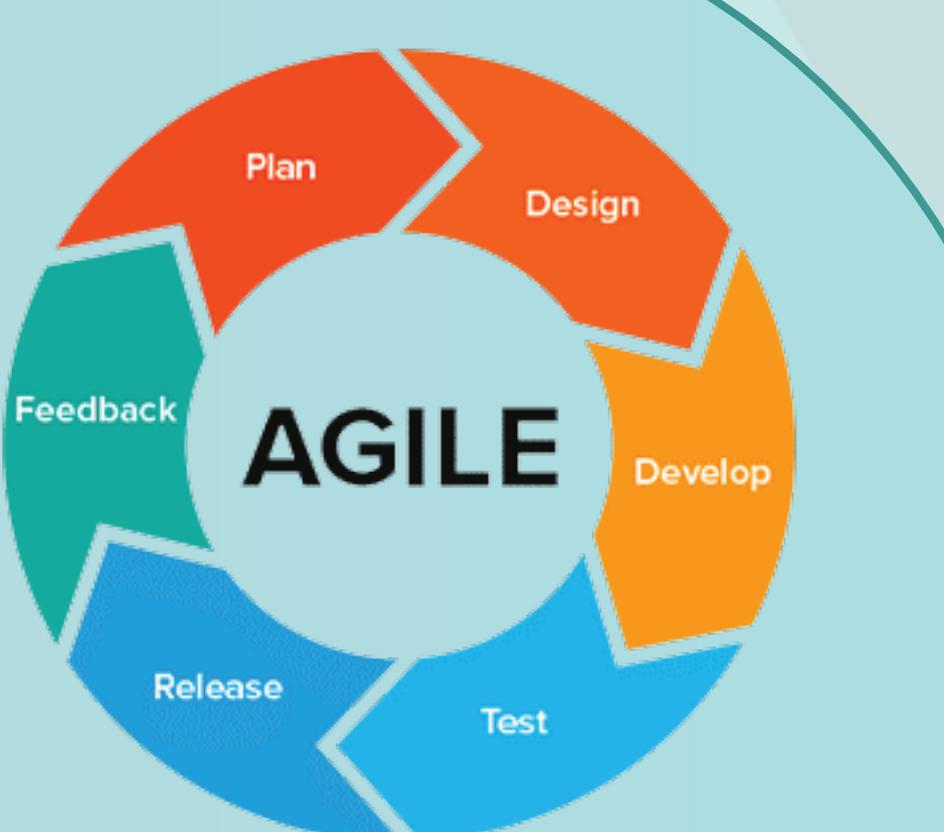

Nowadays everything almost is based on technology but not everyone is familiar with how technology works and functions, If a user faced a problem on his Laptop for example, The traditional way that user will do is to go to a store and leave his device in the store so they can fix it, Which will waste user time, effort and money. TeQani will provide help for users in their places, They can post an order to fix their problem, Choose an offer from the offers list, After that the Freelancer will come to his place to fix the problem.

Objectives

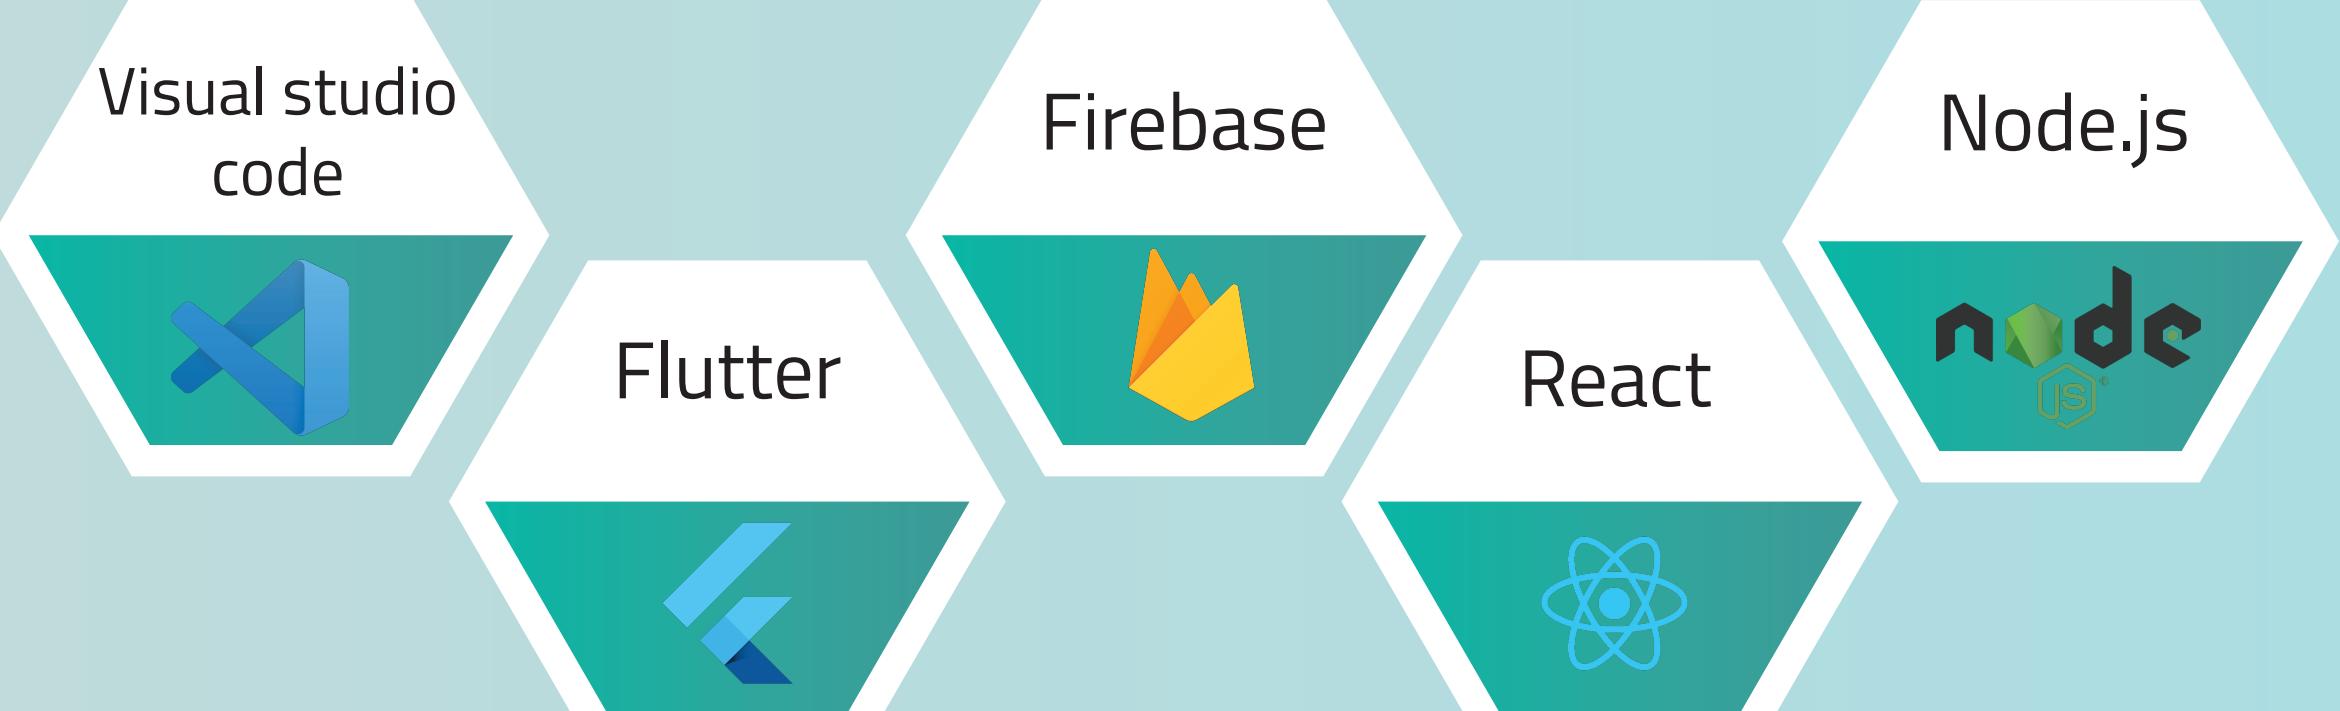

- Provide all kind of tech solutions.
- Let the User choose which worker to fix their problem.
- Provide rating system to rate freelancers.
- Help technicians to add a new source of income
- Help people during COVID19 crisis by providing online solutions for their devices.
- Provide competition between the technicians for better services.

Methodology

We will use the Agile methodology since team members are familiar and our software will be evolutionary throughout the project timeline.

Tools

Result

A mobile application that help users in fixing their technical problems by posting their problem and get responses form freelancers, And also the application will help freelancers to get experiences and add a new source of income. Also, Web application for TeQani administration.

Acknowledgment

We appreciate our supervisor Prof.Mohammed AlHaddad for his guidance and supportance, Also we want to apperciate the Faculty of computing and information technology for helping and supporting us in our academic journey not only-but also the committee members.
